

About the workshop

Ubiquitous computing (UbiComp) is a field of computing that encourages the integration of microprocessors, storage, and wireless communications into everyday objects and explores new paradigms of human-computer interactions that affect and influence everyday lives. UbiComp is the premier outlet for novel research contributions that advance the state of the art in the design, development, deployment, evaluation and understanding of ubiquitous computing systems. UbiComp is an interdisciplinary field of research and development that utilizes and integrates pervasive, wireless, embedded, wearable and/or mobile technologies to bridge the gaps between the digital and physical worlds. Some of the applications of UbiComp which basically drive research in this area are healthcare, business process, disaster mitigation and management, farmland irrigation, surveillance and empowering the common man to enhance the quality of life.

Target Audience

Students, research scholars, faculty members, and professionals working in industry will be benefitted by this workshop.
